

How to Clear the Cache in your PC - For Internet Explorer 6

To clear temporary internet cached files for Internet Explorer, please follow these steps:

1. Open an Internet browser to any website.
2. Click on **Tools** at the top then click on **Internet Options** in the window that opens.

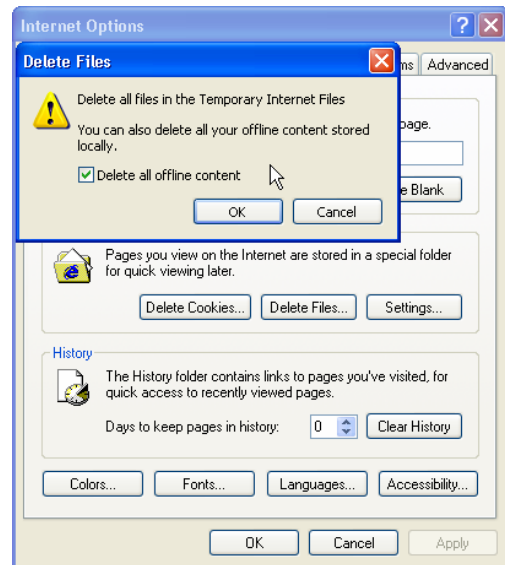

3. Click on the **Delete Files** button in the center of the dialog box:

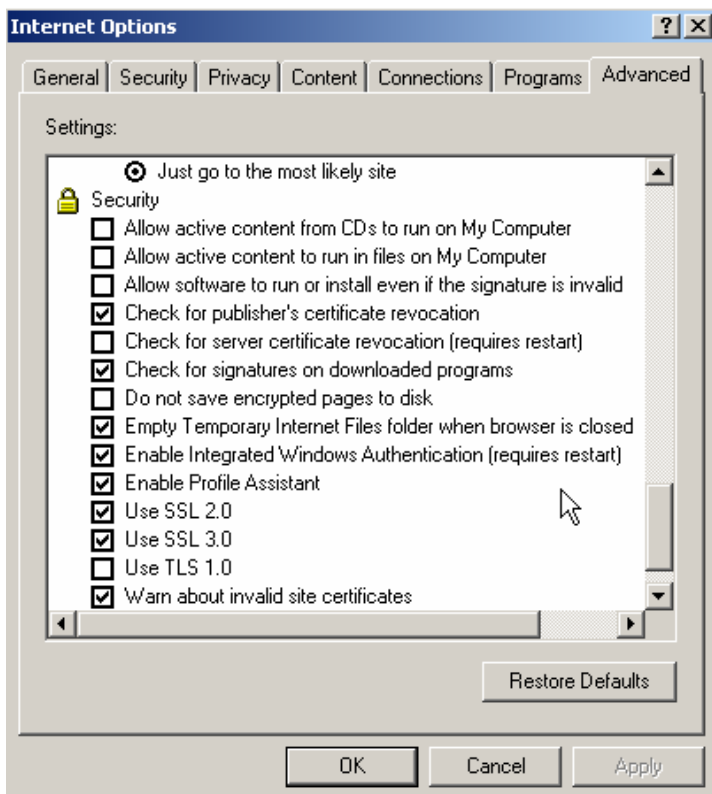

4. Click the box next to Delete all offline content then click OK. An hour glass will appear until the system has finished processing. When the hourglass turns back to a pointer click OK on the dialog box.

5. Now click the “Delete Cookies” button and follow the same procedure in #4.

NTREIS recommends that you make a permanent adjustment to your settings which will automatically clear your cache every time you close your browser. To accomplish this, open “Internet Options” from your browser and select the “Advanced” tab:

Scroll down to the section labeled “Security” and check the box that says “Empty Temporary Internet Files folder when browser is closed.” Then click the OK button.
