

Norton Internet Security 2007

At this time, Norton 2007 Security does not interfere with use of NTRIS Listings when installed directly as is from the box.

There is an Add-On Pack that is available for download separately. When you install this to Norton, you will have Ad Blocking and Pop-Up Blocking that can interfere with certain features of NTREIS Listings.

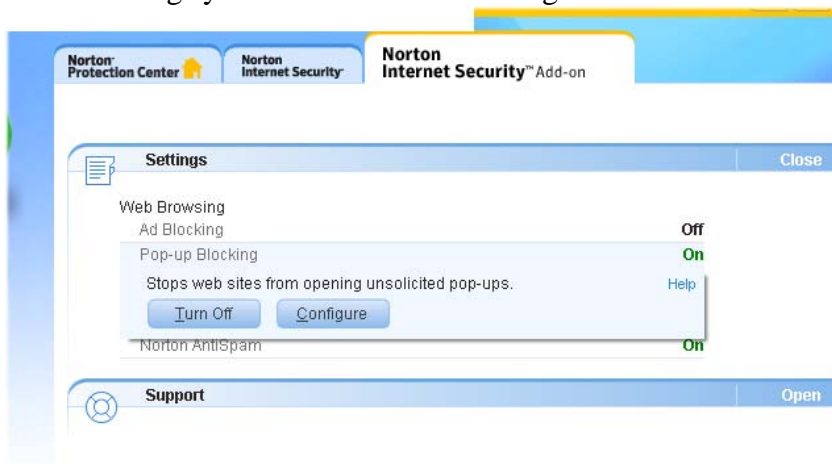

How can I tell if the Add-On Pack is installed?

You will have a 3rd tab at the top that is called Norton Internet Security Add-on.

How do I turn off Ad-blocking or Pop up Blocking?

Click the Tab at the top that says Add-on.
Under Settings you will see Web Browsing.

Choose Ad Blocking or Pop-up Blocking and click Turn Off.
The Toolbar on NIS 2007 does not contain the ability to turn off per site like the 2006 or earlier versions.
